# Investor OS — trust, transparency, and compliance in one workspace.

Private equity still runs on inboxes and shared drives. CAEPS gives a general partner one place to stand up a fund, onboard LPs and portfolio companies, collect the papers, and hand work to the people who own it.

ABOUT THE PROJECT

## A workspace for funds, people, and paper.

CAEPS is an investor OS for PE fund partners. It runs a fund into a first close — connecting LPs, GPs, and portfolio companies in one workspace — so partners can create vehicles, attach the network, manage documents and tasks, and delegate reviews instead of chasing them across email and shared drives.

| ROLE | OWNER | PLATFORM | PROGRESS |
|---|---|---|---|
| **Product design — brand, UIs, IA, key flows** | **Private equity · Fund administration** | **Web, desktop-first application** | **caeps.com · 2020** |

PROBLEM STATEMENTS

## Funds were lists. Networks were spreadsheets. Tasks were email.

01

### No fund home

A partner could not open one screen and see every vehicle, its AUM, and who still owed a document.

02

### LP and portco were detached

Investors and companies lived in a CRM or a folder. They were not first-class objects on the fund.

03

### Creating a fund was a lawyer workflow

Name, vehicle type, team, and first attachments were assembled offline, then retyped into admin tools.

04

### Work had no owner inside the product

Document collection and reviews bounced on email. Nothing said who owed what by when.

KEY FEATURES

## Four roles, four frictions.

| 01 | LP / HOMIN |
|---|---|
| | Starts the day without a board of cards. Creating a vehicle means leaving the product. Inviting the team is a side channel. |

| 02 | FUND TEAM |
|---|---|
| | Cannot see which LPs or portcos are attached, which docs are missing, or which tasks are open on this fund. |

| 03 | LP CONTACT |
|---|---|
| | Gets asked on a call, not on a profile with documents, reports, and a relationship back to the vehicle. |

| 04 | OPS / SECURITY |
|---|---|
| | Delegation is lifted knowledge. Two-factor authentication exists in policy decks, not in the login path. |

PRODUCT THESIS

## How the product in this file grew.

| 01 | 02 | 03 | 04 |
|---|---|---|---|
| **Auth path** | **Fund home** | **Create + attach** | **Capital + ops** |
| Registration → 2FA setup → success → login. Security is the product, not a settings afterthought. | Dashboard as a ripple of vehicles. The empty state tells the partner to create the first fund. | Create New Fund, then add LPs and portfolio companies — the moment the network that makes it a network. | Cap table and units. Overview metrics, Fund Network, Fund Management, documents, delegations. |

UI USER FLOWS

## Every primary path that exists as a frame.

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| 1 | **First session** | Registration | 2FA setup | Success | Login | Dashboard (empty) | | |
| 2 | **Wound up a vehicle** | Dashboard | Create New Fund | Name / type / team | Fund lands on the dashboard | | | |
| 3 | **Build the network** | Fund | Add LP & Portfolio | View LP & Portfolio | Fund Network | | | |
| 4 | **Define the economics** | Analytics | Cap table | Create units | Issue units | Overview metrics | | |
| 5 | **Run the fund** | Fund Management | Documents + tasks | Fund Details | Delegations | | | |
| 6 | **Return visit** | Login | 2FA challenge | Dashboard of existing funds | | | | |

CAEPS

## What left the canvas.

| 01 | **Brand system** | Scaled 0.4 → 1.1, geometric mark, Inter + Inconsolata, print references. |
|---|---|---|
| 02 | **Marketing site** | Landing, Hosts, features, request demo, mobile states. |
| 03 | **Auth front door** | Registration, welcome, login, 2FA setup and challenge. |
| 04 | **Dashboard** | Bird's-eye fund table, left-of-empty-state, viewed 1,741. |
| 05 | **Create New Fund** | Name, type, team — vehicle as a first-class object. |
| 06 | **Add LP & Portfolio** | Attach both sides of the network to the fund. |
| 07 | **Cap table + units** | Create the cap table, define unit classes, issue units. |
| 08 | **Fund Overview** | Committments, multiples, life cycle, timeline, call memos. |
| 09 | **Fund Network** | Your connected investors, documents, and tasks. |
| 10 | **Fund Management** | Fund-level documents, documents to, tasks out. |
| 11 | **Delegations** | Hand off work to partners, to someone in the network. |
| 12 | **Trust features** | Transfer control, digital credentials, multi-layer verification. |

ANNOTATED SCREENS

## What each key screen is for.

### Overview — pulse of one fund

After a partner opens a vehicle, this is the first read: allocation mix, commitments, performance multiples, life cycle, and call cadence. Dashed lines is a quote sheet, not a chart dump.

- Every KPI, MOIC and every fund poses, not moving data.
- Cap tables, Capital calls, and Dist. waterfall all under one roof.
- The timeline is a record of the vehicle's life, not only a quarterly.

### Cap table — set up ownership

A vehicle, not a report. Create the cap table, define unit classes, then issue units. Each step can be finished here or handed off with design task.

- Vesting with stops locked until units exist — you cannot issue what you have not defined.
- Assign task keeps legal and ops inside the product.
- This issue each series capital calls or the waterfall can run.

### Add Fund — papers, LPs, portfolios

Step 3 of standing up a vehicle: attach the trust deed and PAS, invite partners, add portfolio companies, then submit. This is the moment a name becomes a fund.

- Upload or delegate — documents do not sit the create flow.
- Invited LPs carry for ID and read & warranties on the same card.
- Submit is the last gate. Back keeps the draft.

### Fund Network — see the graph

Who sits around this fund. Team, service providers, LPs and portfolios — with documents and tasks hanging off the graph. The fund is a set of relationships, not a folder.

- Role groups make both sides of private markets legible.
- Click a node opens on the network, not to a generic inbox.
- A work tool now invites from a dashboard row — the groups scale.

### Fund Management — run the work

Operations inside the vault, vehicle. Linked funds, vintage, created date, and the door to add another. This is where a partner or ops lead spends the week.

- Covered list of vehicles, while the at metrics overview.
- Add Fund is the same empty-state promise as the first dashboard.
- Fast-add Fund Details (profile and Delegations (benefit).

CLOSING

## What this product taught the design.

| 01 | 02 | 03 |
|---|---|---|
| **The empty dashboard is the onboarding.** | **A fund is a network, not a folder.** | **Every setup step must be assignable.** |
| Nothing in the home state is the prompt to create the first vehicle — not a dead end. | LPs, portcos, documents, and tasks only work when they hang off one vehicle. | Cap tables, calls, papers, invites — if it cannot be delegated, the flow leaves the product and dies in email. |

NEXT CASE

## What the file now holds as a product.

**One OS instead of a pile of tools.**
Brand, site, auth, fund create, network, documents, and delegations sit in a single product a GP can open after push.

**A fund can be stood up in-product.**
Name the vehicle, attach papers, invite LPs, add portcos, define units — without leaving. CAEPS, for email or a shared drive.

**Ops has an owner.**
Documents, cap table rules, and reviews can be assigned inside the fund, so work lives on the vehicle instead of in someone's inbox.

## Register. Secure. Command. Build the network. Run the fund.
