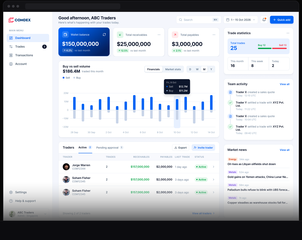
CASE STUDY · FINTECH · BLOCKCHAIN · B2B SAAS

The blockchain platform for global commodity trade.

Commodity deals in a $17T market still run on emails, calls and PDFs. I designed Comdex end-to-end — one desktop product that feels like a trading terminal and takes a deal from discovery to settlement.

ROLE	TEAM	SCOPE	PLATFORM	YEAR
Sole product designer	1 PM · 3 engineers	Website · 3 modules · Block explorer	Desktop web app	2019



IMPACT AT A GLANCE

$10M+
Pilot trade volume processed on the platform

Days → 1
Multi-day email/PDF back-out to a single Deal Room session

5
Core flows shipped as handoff-ready in 6

3 + 1
Product modules, plus a public block explorer

01 — PROBLEM

Global trade ran on inboxes, not infrastructure.

Deals were stitched together from emails, calls, PDFs and manual checks — so terms and settlement were slow, and trust between counterparties was hard to establish.

PAIN POINT	BEFORE RESPONSE
Paper title in transit	On-chain title + document pack, kept in the Deal Room
Correspondent-bank lag	Escrow + dUSD, so capital isn't stuck overnight
Opaque counterparties	One Comdex ID with reusable KYC and reputation

THE SOLUTION — Comdex unifies discovery, negotiation and settlement into **one closed-loop system of record** — find a counterparty, agree terms, and settle with confidence.

02 — PROCESS

Research to handoff in four phases.

Phase 1
Discover
Market & gap research
Competitors
User personas

Phase 2
Define
Constraints
Problem statement
User flows

Phase 3
Develop
Wireframes
Lo-fi prototype
Test with traders

Phase 4
Deliver
Hi-fi prototype
Engineering handoff

03 — UX & USER FLOW

One closed loop, from sign-up to settlement.

Seven steps cover the whole deal, so a trader never leaves Comdex to finish one.

Auth — Log in / Sign up, Comdex ID, KYC
Hub — Discovery, Settlement, Finance
Discovery — Dashboard, Markets, Orders, View sell order
Create order — Commodity, Grade, Confirm
Deal Room — Negotiate, Counter, Documents
Settlement — Escrow, dUSD rate, Title transfer
Finance — Sell LPO, Order book, Financial request

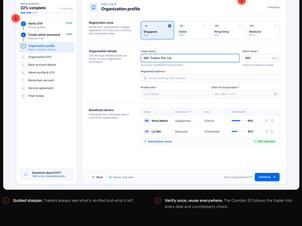
Where the old process lost days — the core of the redesign

04 — KEY DECISIONS

Three screens that made the loop work.

A — COMDEX ID & KYC

One verified record for every counterparty — powering KYC, settlement and compliance from a single source of truth.

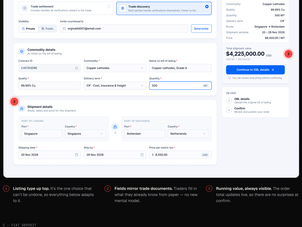


1 **Guided onepager.** Traders always see what's verified and what's left.

2 **Verify once, reuse everywhere.** The Comdex ID follows the trader into every deal and counterparty check.

B — THE SELL LEDGER

Lead with the irreversible choice — pick the listing type first, and let the form follow.



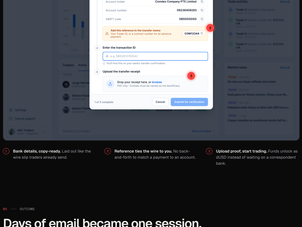
1 **Listing type up top.** It's the one choice that can't be undone, so everything below adapts to it.

2 **Fields mirror trade documents.** Traders fill in what they already know from paper — no new mental model.

3 **Running value, always visible.** The order total updates live, so there are no surprises at confirm.

C — OUTCOME

Fiat in, trade unlocked — no 24-hour correspondent-bank wait.



1 **Bank details, copy-ready.** Laid out like the wire-size trackers already send.

2 **Reference line the wire to you.** No back-and-forth to match a payment to an account.

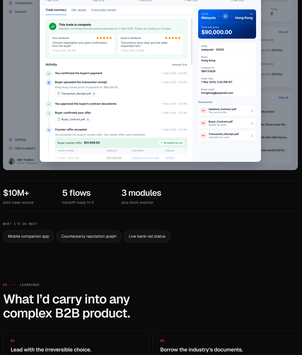
3 **Upload proof, start trading.** Funds unlock as dUSD instead of waiting on a correspondent bank.

05 — OUTCOME

Days of email became one session.

BEFORE
A multi-day loop of emails, PDFs and correspondent banks.

AFTER
A single Deal Room session — negotiate, document and settle in one place.



$10M+
pilot trade volume

5 flows
handoff-ready in 6

3 modules
and block explorer

WHAT I'D DO NEXT

Mobile companion app · Counterparty reputation graph · Live bank-rail status

06 — LEARNINGS

What I'd carry into any complex B2B product.

01
Lead with the irreversible choice.
Ask for the lasting type first, then let the form follow from it.

02
Borrow the industry's documents.
Reuse them as the UI pattern instead of inventing a new one.

03
Identity is the happy path.
Treat reusable identity and running values as part of the core flow, not edge cases.

04
Design settlement with discovery.
Do both in the same place — or the product splits into two apps.

Thanks for reading.
