CAPTL

CASE STUDY · PRODUCT DESIGN · 2020 · +3 ENGINEERS

Investor OS — trust, transparency, and compliance in one workspace.

Private equity still runs on inboxes and shared drives. CAPTL gives a general partner one place to stand up a fund, attach LPs and portfolio companies, collect the papers, and hand work to the people who owe it.

ABOUT THE PROJECT

A workspace for funds, people, and paper.

CAPTL is an investor OS for PE fund partners. It turns a fund into a first-class object — connecting GPs, LPs, and portfolio companies in one workspace — so partners can create vehicles, attach the network, manage documents and tasks, and delegate reviews instead of chasing them across email and shared drives.

ROLE	DOMAIN	PLATFORM	PRESENCE
Product design — brand, site, IA, key flows	Private equity · Fund administration	Web, desktop-first application	captl.one · 2020

PROBLEM STATEMENTS

Funds were lists. Networks were spreadsheets. Tasks were email.

01

No fund home

A partner could not open one screen and see every vehicle, its AUM, and who sits around it.

02

LP and portco were detached

Investors and companies lived in a CRM or a folder. They were not first-class objects on the fund.

03

Creating a fund was a lawyer workflow

Name, vehicle type, team, and first attachments were assembled offline, then retyped into admin tools.

04

Work had no owner inside the product

Document collection and reviews bounced on email. Nothing said who owed what by when.

PAIN POINTS

Four roles, four frictions.

GA **GP / ADMIN**

“Starts the day without a board of funds. Creating a vehicle means leaving the product. Inviting the team is a side channel.

FT **FUND TEAM**

“Cannot see which LPs or portcos are attached, which docs are missing, or which tasks are open on this fund.

LP **LP CONTACT**

“Gets added as a row, not as a profile with documents, reports, and a relationship back to the vehicle.

OS **OPS / SECURITY**

“Delegation is tribal knowledge. Two-factor authentication exists in policy decks, not in the login path.

PROJECT TIMELINE

How the product in this file grew.

1 — 01

Auth path

Registration → 2FA setup → success → login. Security is the first product surface, not a settings afterthought.

2 — 02

Fund home

Dashboard as a table of vehicles. The empty state tells the partner to create the first fund.

3 — 03

Create + attach

Create New Fund, then add LPs and portfolio companies — the two objects that make a fund a network.

4 — 04

Capital + ops

Cap table and units, Overview metrics, Fund Network, Fund Management, documents, delegations.

IA · USER FLOWS

Every primary path that exists as a frame.

A **First session** — Registration → 2FA setup → Success → Login → Dashboard (empty)

B **Stand up a vehicle** — Dashboard → Create New Fund → Name / type / team → Fund lands on the dashboard

C **Build the network** — Fund → Add LP & Portfolio → View LP & Portfolio → Fund Network

D **Define the economics** — Analytics → Cap table → Create units → Issue units → Overview metrics

E **Run the fund** — Fund Management → Documents + tasks → Fund Details → Delegations

F **Return visit** — Login → 2FA challenge → Dashboard of existing funds

SHIPPED

What left the canvas.

01

Brand system

Spaced C A P T L, geometric mark, gold / cream / charcoal, print letterhead.

02

Marketing site

Landing, thesis, features, request demo, mobile views.

03

Auth front door

Registration, welcome, login, 2FA setup and challenge.

04

Dashboard

All funds in one table, with an empty-state create CTA.

05

Create New Fund

Name, type, team — vehicle as a first-class object.

06

Add LP & Portfolio

Attach both sides of the network to the fund.

07

Cap table + units

Create the cap table, define unit classes, issue units.

08

Fund Overview

Commitments, multiples, life-cycle timeline, unit classes.

09

Fund Network

LPs / portfolios columns, documents, and tasks.

10

Fund Management

Operational home: documents in, tasks out.

11

Delegations

Hand a document or review to someone in the network.

12

Trust features

Integrity checks, region compliance, multi-layer verification.

ANNOTATED SCREENS

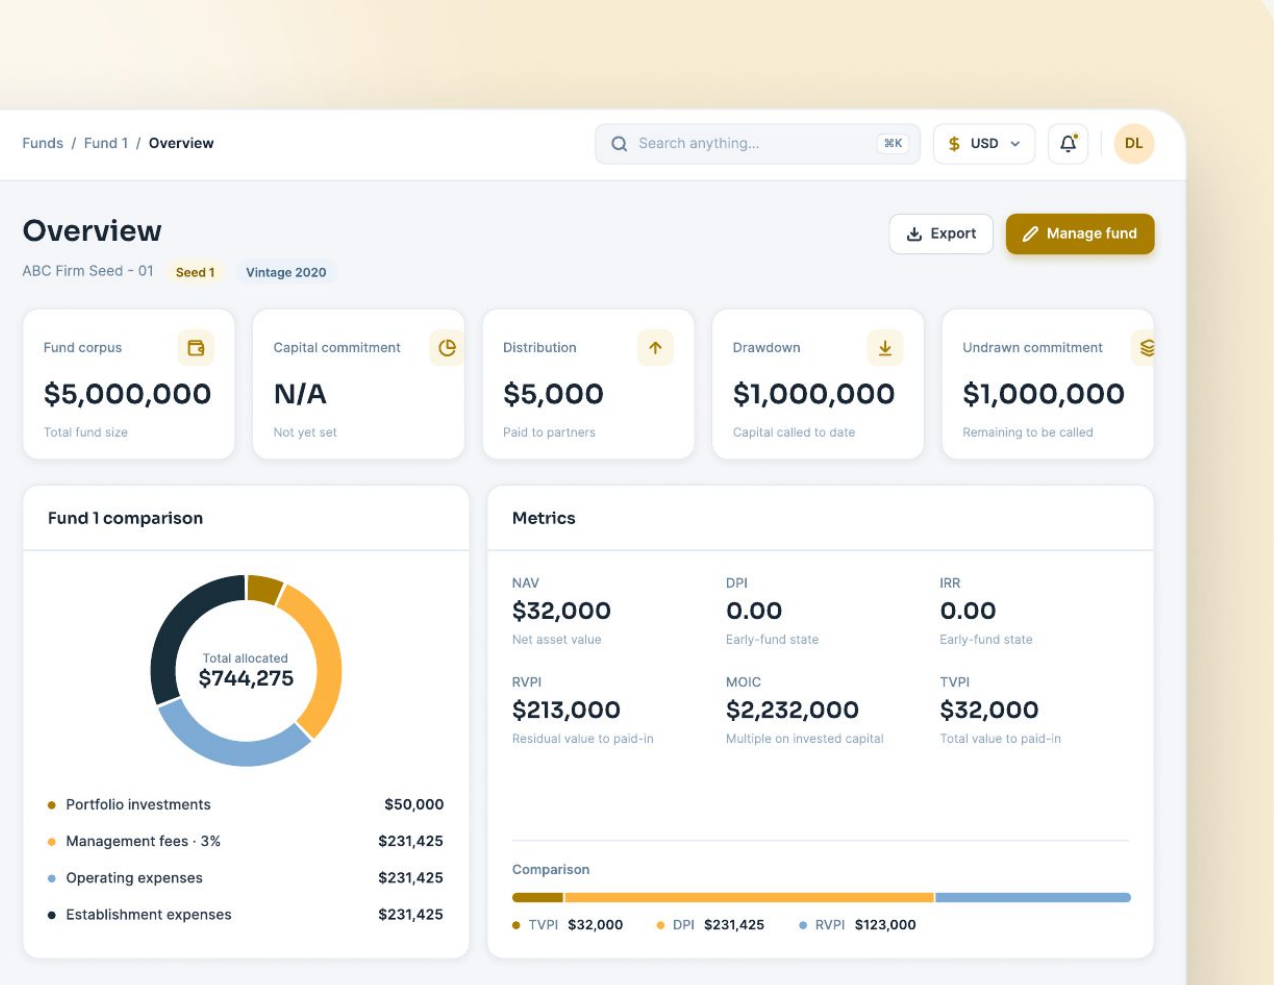
What each key screen is for.

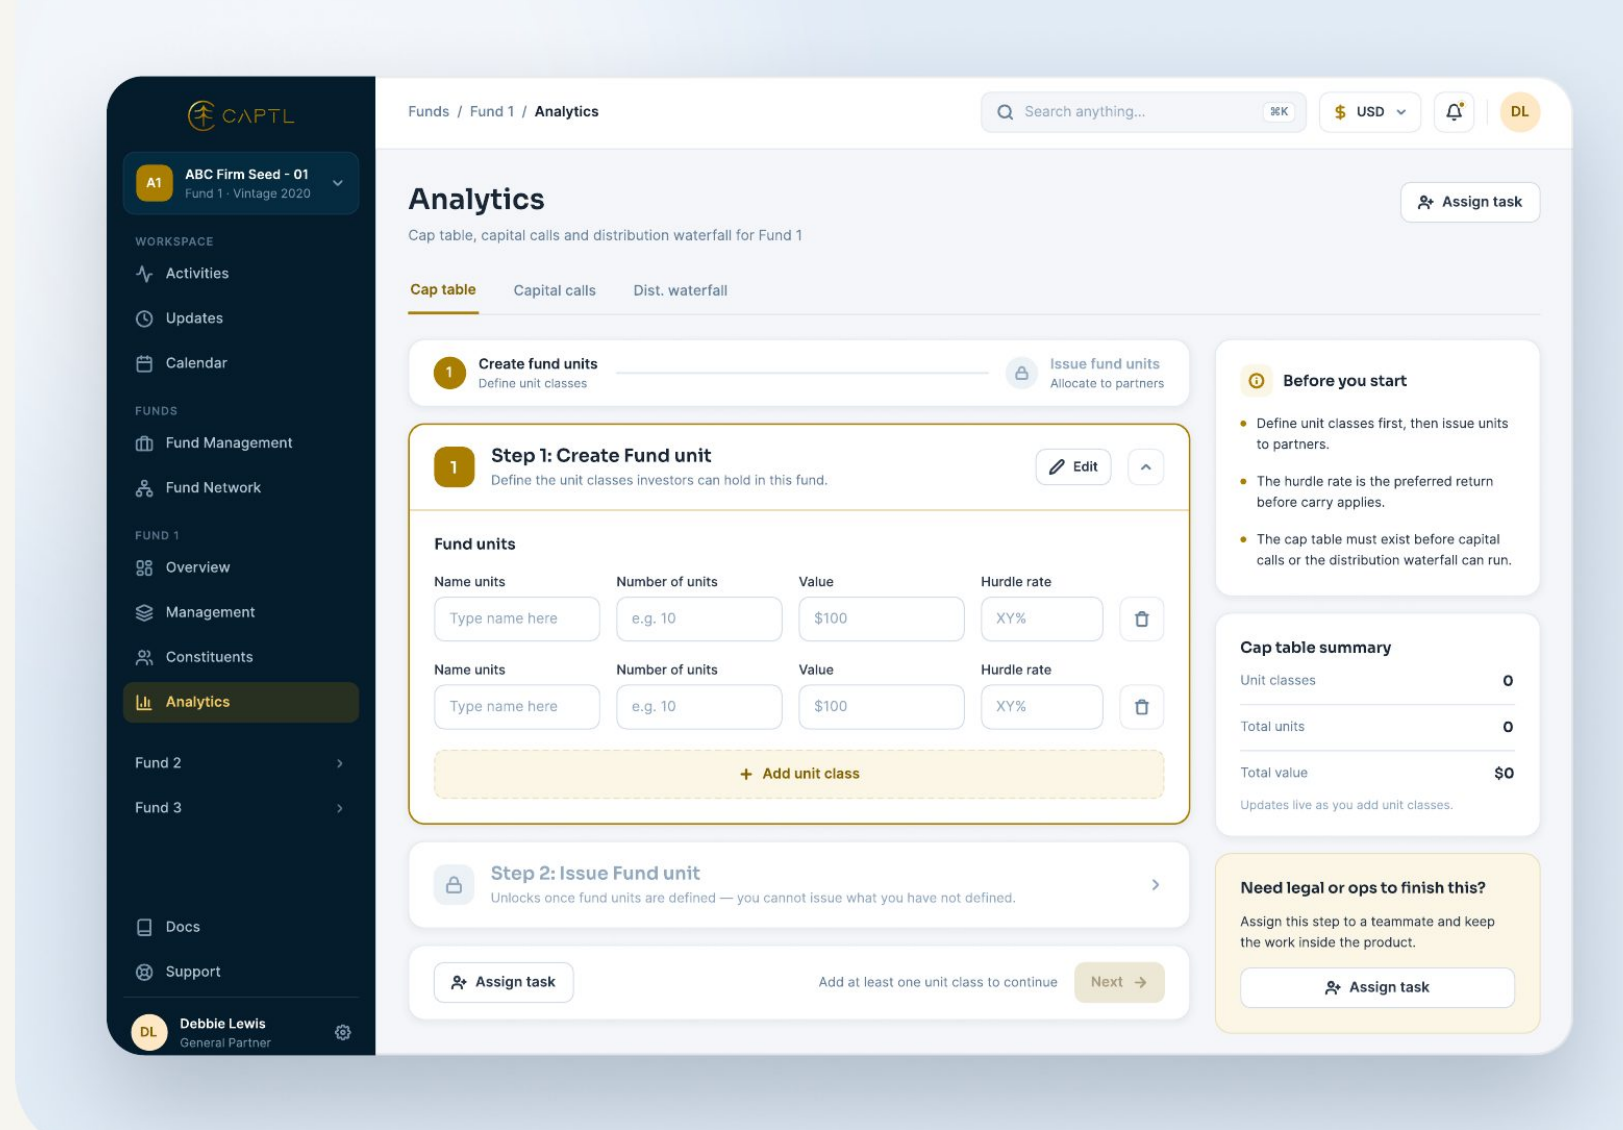
01 ——

Overview — pulse of one fund

After a partner opens a vehicle, this is the first read: allocation mix, commitments, performance multiples, life-cycle, and unit classes. Overview is a quote sheet, not a chart dump.

- ✓ Zeros (DPI, IRR) are early-fund states, not missing data.
- ✓ Cap table, Capital calls, and Dist. waterfall sit under this summary.
- ✓ The timeline is a record of the vehicle’s life, not only a sparkline.





Funds / Fund 1 / Analytics

Analytics

Cap table, capital calls and distribution waterfall for Fund 1

Step 1: Create Fund unit — Define the unit classes investors can hold in this fund.

Before you start
- Define unit classes first, then issue units to partners.
- The hurdle rate is the preferred return before carry applies.
- The cap table must exist before capital calls or the distribution waterfall can run.

Cap table summary: Unit classes 0 · Total units 0 · Total value $0

Step 2: Issue Fund unit — Unlocks once fund units are defined — you cannot issue what you have not defined.

Need legal or ops to finish this? Assign this step to a teammate and keep the work inside the product.

02 ——

Cap table — set up ownership

A wizard, not a report. Create the cap table, define unit classes, then issue units. Each step can be finished here or handed off with Assign task.

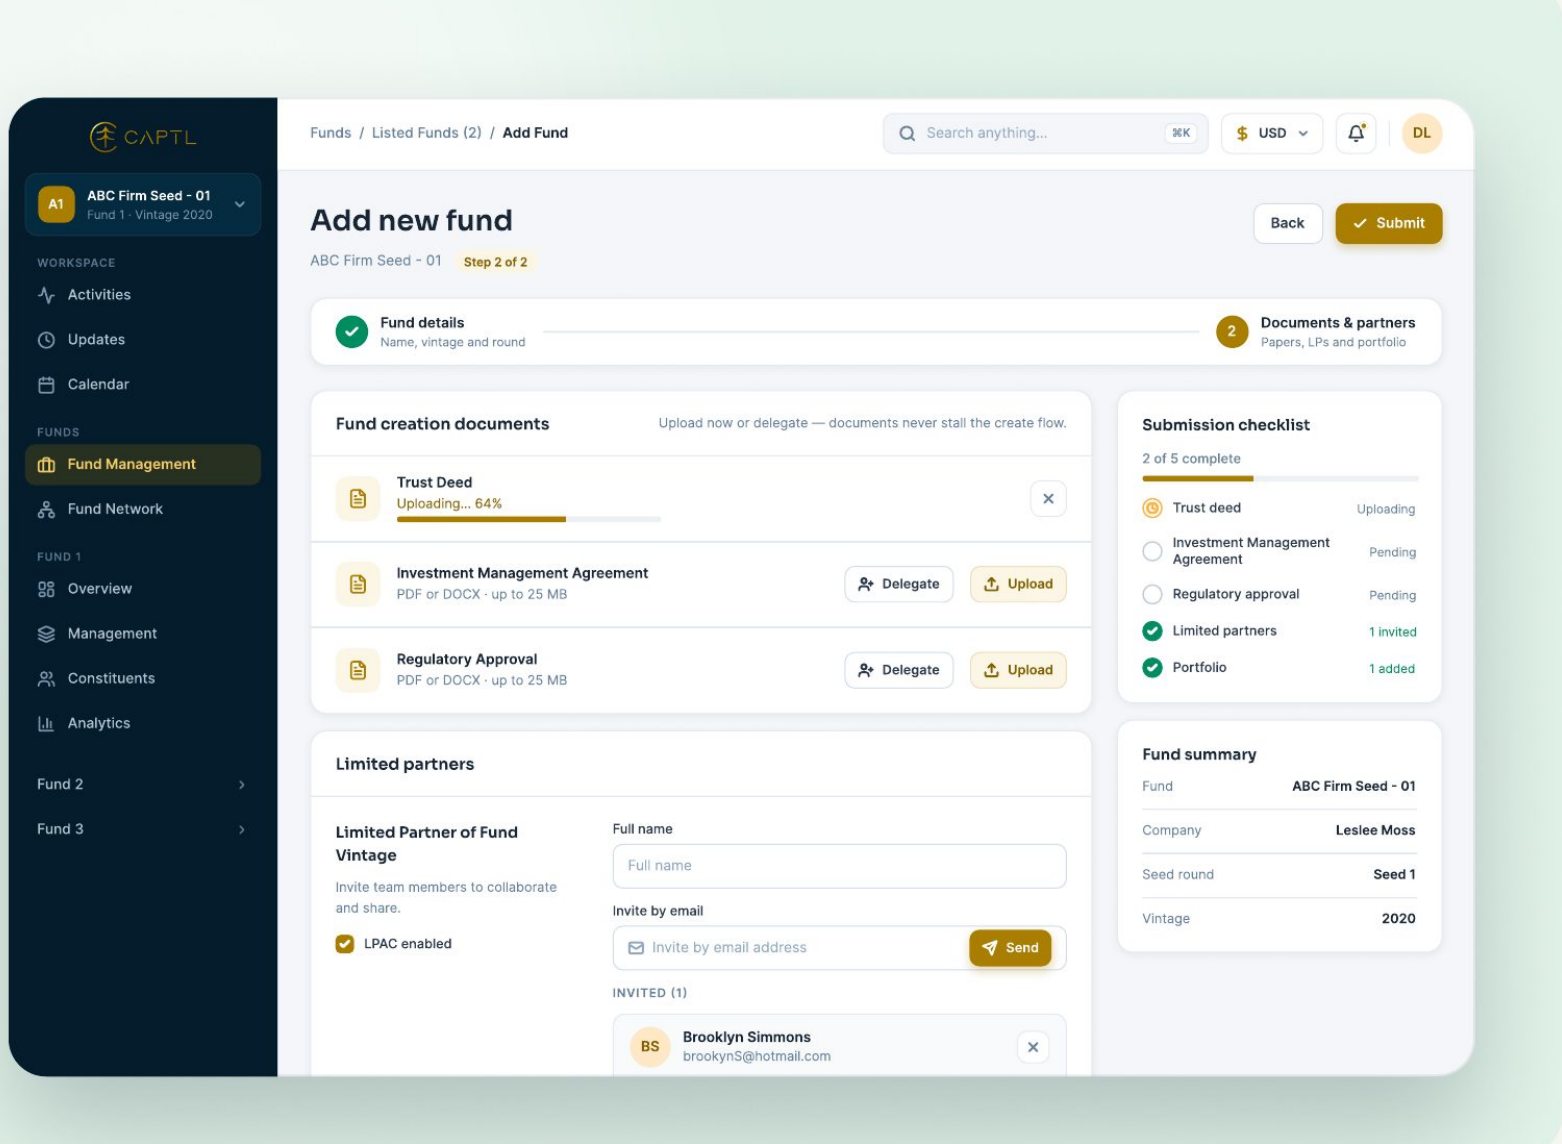
- ✓ Issuing units stays locked until units exist — you cannot issue what you have not defined.
- ✓ Assign task keeps legal and ops inside the product.
- ✓ This must exist before capital calls or the waterfall can run.

03 ——

Add Fund — papers, LPs, portfolios

Step 2 of standing up a vehicle: attach the trust deed and IMA, invite limited partners, add portfolio companies, then submit. This is the moment a name becomes a live fund.

- ✓ Upload or delegate — documents do not stall the create flow.
- ✓ Invited LPs carry tax ID and reps & warranties on the same card.
- ✓ Submit is the last gate; Back keeps the draft.



Funds / Listed Funds (2) / Add Fund

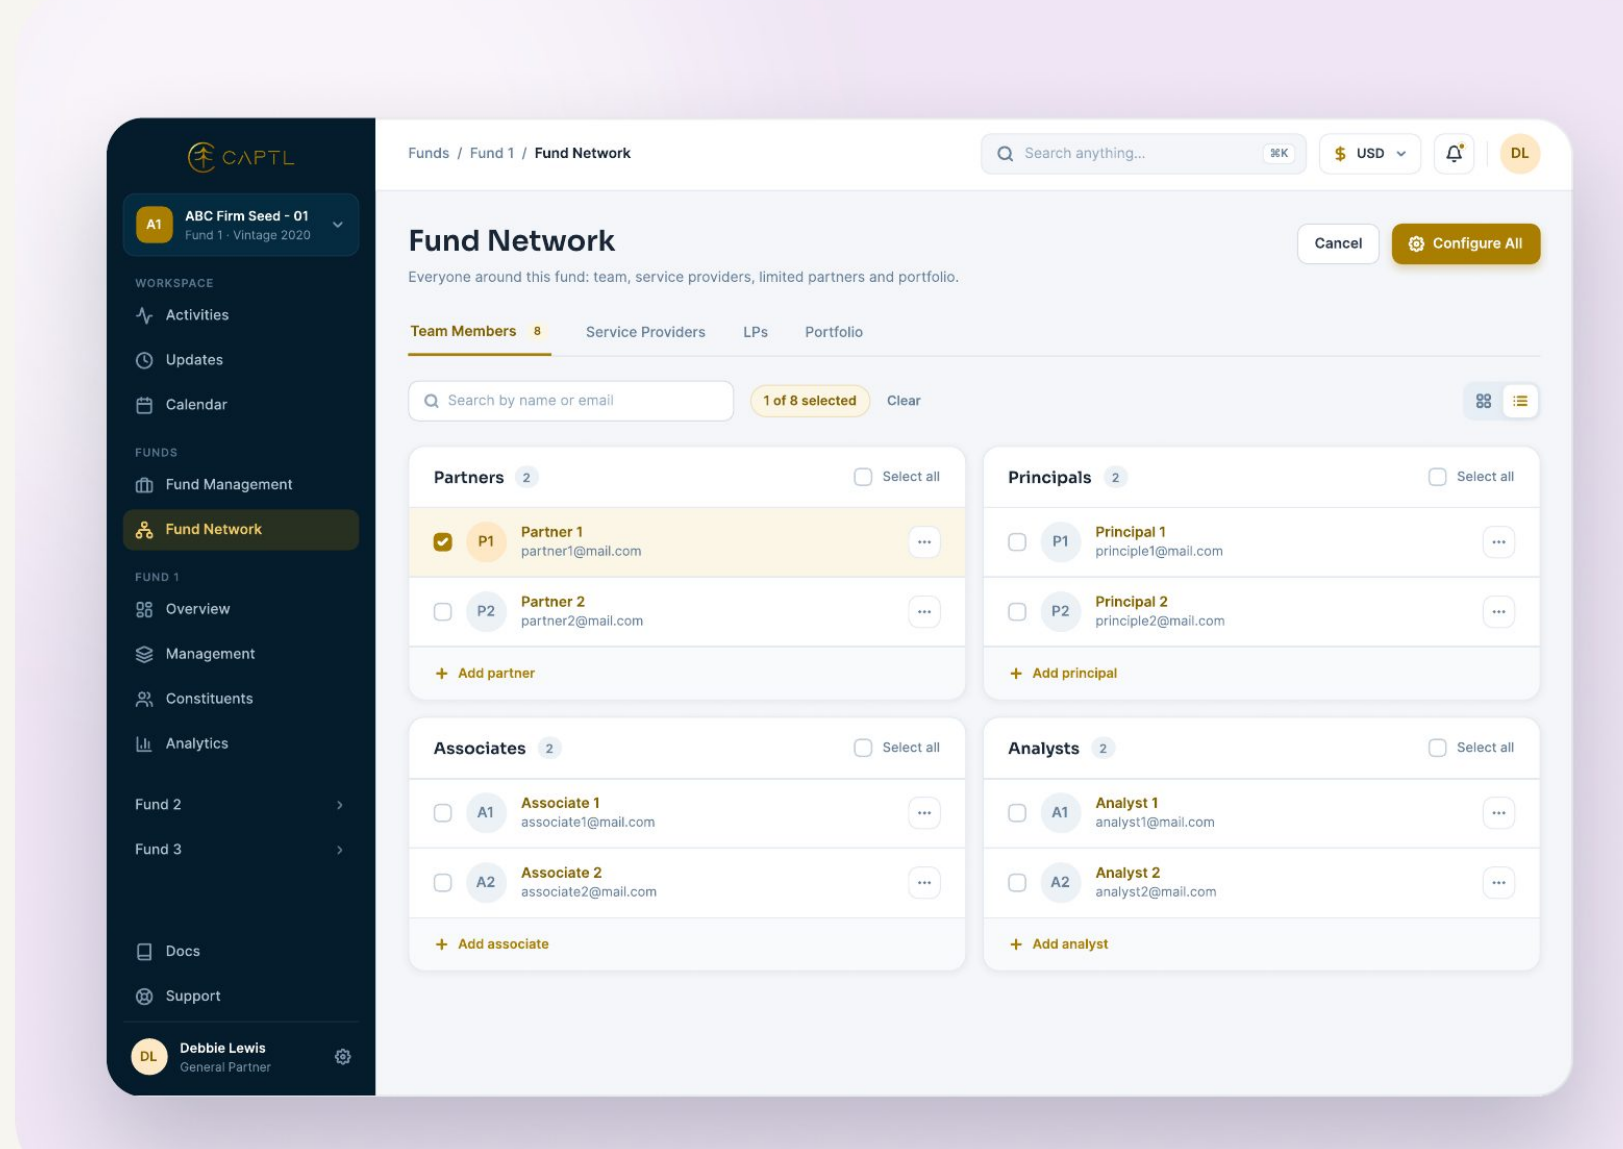
Add new fund

Fund creation documents — Upload now or delegate — documents never stall the create flow.
- Trust Deed — Uploading... 64%
- Investment Management Agreement — PDF or DOCX · up to 25 MB
- Regulatory Approval — PDF or DOCX · up to 25 MB

Submission checklist — 2 of 5 complete
- Trust deed — Uploading
- Investment Management Agreement — Pending
- Regulatory approval — Pending
- Limited partners — 1 invited
- Portfolio — 1 added

Fund summary: Fund ABC Firm Seed - 01 · Company Leslee Moss · Seed round Seed 1 · Vintage 2020

Limited partners — Limited Partner of Fund Vintage. Invited (1): Brooklyn Simmons



Funds / Fund 1 / Fund Network

Fund Network

Everyone around this fund: team, service providers, limited partners and portfolio.

Partners (2): Partner 1, Partner 2 · Principals (2): Principal 1, Principal 2 · Associates (2): Associate 1, Associate 2 · Analysts (2): Analyst 1, Analyst 2

04 ——

Fund Network — see the graph

Who sits around this fund. Team, service providers, LPs and portfolios — with documents and tasks hanging off the graph. The fund is a set of relationships, not a folder.

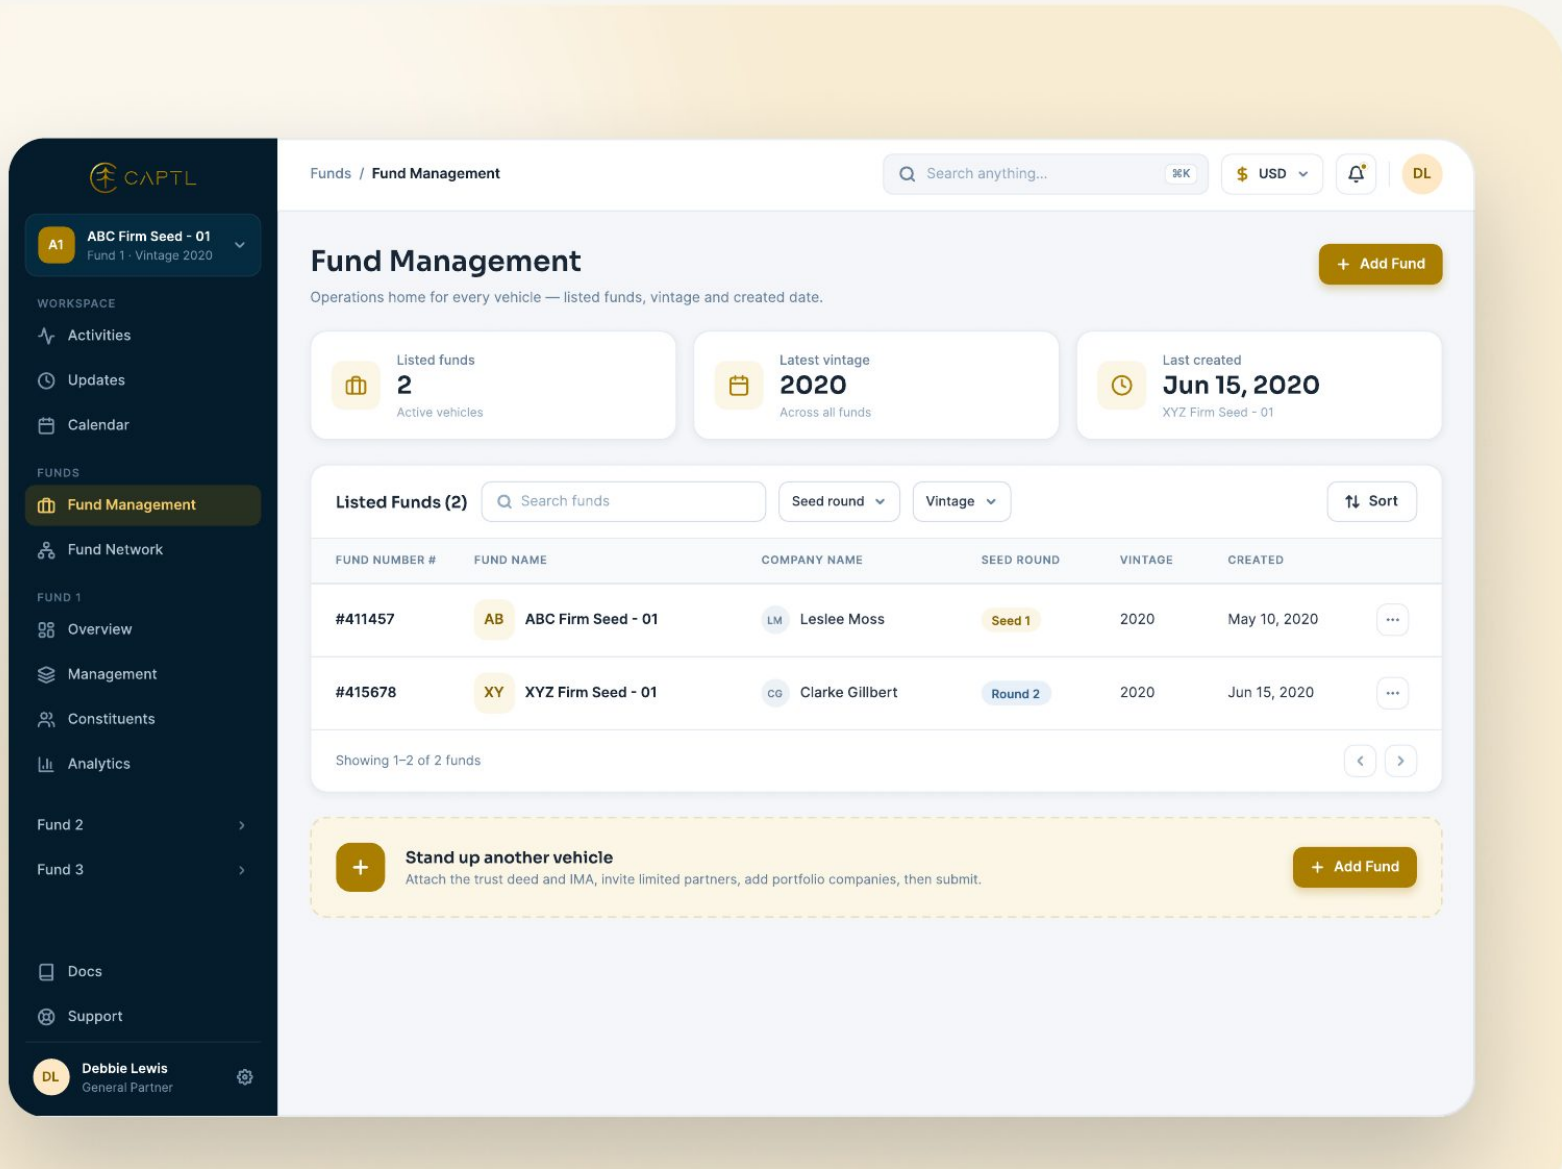
- ✓ Role groups make both sides of private markets explicit.
- ✓ Docs and tasks park on the network, not in a generic inbox.
- ✓ A real fund has more nodes than a dashboard row — the groups scale.

05 ——

Fund Management — run the work

Operations home for every vehicle. Listed funds, vintage, created date, and the door to add another. This is where a partner or ops lead spends the week.

- ✓ Scoped list of vehicles, unlike the all-metrics Overview.
- ✓ Add Fund is the same empty-state promise as the first dashboard.
- ✓ Pairs with Fund Details (profile) and Delegations (handoff).



Funds / Fund Management

Fund Management

Operations home for every vehicle — listed funds, vintage and created date.

Showing 1–2 of 2 funds

Stand up another vehicle — Attach the trust deed and IMA, invite limited partners, add portfolio companies, then submit.

LEARNINGS

What this product taught the design.

01

The empty dashboard is the onboarding.

Nothing in the fund table is the prompt to create the first vehicle — not a dead end.

02

A fund is a network, not a folder.

LPs, portcos, documents, and tasks only work when they hang off one vehicle.

03

Every setup step must be assignable.

Cap table, units, papers, invites — if it cannot be delegated, the flow leaves the product and dies in email.

OUTCOMES

What the file now holds as a product.

✓ **One OS instead of a pile of tools.**

Brand, site, auth, fund create, network, documents, and delegations sit in a single product a GP can open after login.

✓ **A fund can be stood up in-product.**

Name the vehicle, attach papers, invite LPs, add portcos, define units — without leaving CAPTL for email or a shared drive.

✓ **Ops has an owner.**

Documents, cap-table steps, and reviews can be assigned inside the fund, so work stays on the vehicle instead of in someone’s inbox.

CAPTL

Register. Secure. Command. Build the network. Run the fund.
